

## Wide Area Ethernet Services

### Reliable, Private Networking

Manitoba Hydro Telecom's (MHT) wide area Ethernet services enable your organization to connect multiple geographically diverse locations with your own private wide area network (WAN). Our scalable service offers a secure connection, providing your organization with better control of your network.

#### Service Features

- Secure, Layer 2 connection separated from the public Internet;
- Bandwidth starting at 10 Mbps to 100 Gbps;
- Scalable, dedicated, symmetrical bandwidth;
- Low latency;
- 24/7/365 SLA backed uptime;
- Extensions to other service providers, including regional and national carriers;
- High capacity connections to Winnipeg, regional, national, and international data centres.

#### Location

MHT's wide area Ethernet services utilize an extensive network infrastructure in conjunction with regional, national, and international carrier partners.

Contact us to determine if service is available in your area.

#### Technology

- Private, fibre optic connection; more reliable than copper based alternatives;
- Robust microwave radio extensions where fibre can't reach;
- Progressive, protected network engineered to Tier 1 telecommunications standards;
- Layer 2 network built with resilient Cisco and Ciena technology.

#### Support

- 24/7/365 network and infrastructure support from our Manitoba telecommunications team;
- First point of contact support from the Network Operations Centre (NOC);
- Highly trained, industry certified network professionals.
